

Fishbeam Software Releases Data Glue

Fishbeam Software releases Data Glue. Data Glue is the best solution to glue file parts (.001, .002, .003 etc.) together on a Mac. These file parts are usually shared on filehosters like RapidShare, if the original file is too large. Data Glue is HJSplit compatible and works with all common file part formats. You can download and use Data Glue for free at <http://www.fishbeam.com/en/dataglu>.

Features of Data Glue

- Data Glue is the best solution to glue file parts (.001, .002, .003 etc.) together on a Mac. These file parts are usually shared on filehosters like RapidShare, if the original file is too large. Data Glue is HJSplit compatible and works with all common file part formats.
- After gluing a file together, Data Glue moves the parts automatically to the trash and opens archive files (.zip, .rar etc.) automatically with the correct expander application.
- Data Glue integrates perfectly with Safari. You can start the glue operation even if Safari has not finished the download of all file parts. Data Glue waits for the missing parts and glues the already finished parts in the meantime.
- We have optimized Data Glue so that it can glue very fast. You can glue several files at the same time and every glue operation uses its own thread. Because of these advantages, Data Glue is the best glue solution on the Mac.
- With Data Glue you can cut up your own files like the movie from your last hollidays and share it to your friends on a file hoster. With Data Glue you can freely choose the file part size.
- Data Glue is a free download and you can use it free of charge.

You are not allowed to download or share data without the permission of the copyright holder. The first published version of Data Glue is 2.0, because there was a version 1 for internal use only.
