

Fishbeam Software Releases Goldfish 3.4

Today, Fishbeam Software releases the website creation tool Goldfish in a new version. Goldfish 3.4 comes with some new features like Googles reCaptcha anti spam technology for e-mail forms. Many bugs get fixed too. Goldfish 3.4 is available at <http://www.fishbeam.com> starting from \$69 and is free for all existing Goldfish 3 users.

New features in Goldfish 3.4

- Goldfish uses now the system language on Mac OS X instead of its own language chooser
- Apple Quicktime is no longer required for Goldfish for Windows
- The property "Item > Identifier (ID)" is now part of Goldfish Standard instead of Professional
- Internal links (anchors) are now supported to all items with the property "Item > Identifier (Id)"
- More clearly arranged page chooser for creating links and the property "Navigation Menu > Menu > Base Folder"
- The website creation process (preview, create Website, publish website) has now a progress bar
- The new property "Project > Use Short File Paths" shortens paths for links and other files like "../goldfish/index.htm" to "../goldfish/"
- Images for the hover and active effect are now preloaded. That avoids from flickering when executing the hover effect for the first time
- Updated store, picture effect and form scripts. They are running now completely with jquery
- You can now protect your forms from spam using Googles ReCaptcha technology with the property "Form > ReCaptcha Spam Protection"
- The property "Form > Resetbutton" is now disabled by default
- You can use your own images for the cart and buy button in the store now. This includes images for hover and active effect
- You can choose now a color for the shopping cart badge and the numbers (properties "Shopping Cart > Button -> Color of Count Badge", " Shopping Cart > Button > Font Color of Count Badge"

- You can now turn off the cart animation with the flying star (property "Cart > Button > Use Cart Animation")
- The store generates now an individual order number for each order (property "Shopping Cart > Generate Order Number")
- The store shows now the date of order in order e-mails
- The preferences properties "Name of Index File", "Name of Media Folder", "Name of Support Folder", "Suffix of Code Files", "Text Encoding" and "JPEG Export Quality" are now properties of the project. That means you can use different settings for every project
- The property "Project > IE 6 Warning" is now disabled by default, because IE6 usage dropped during the last year
- Internal refactoring reduced the size of the application file and updated the source code
- Help menu updated with new support and manual url

Fixed bugs in Goldfish 3.4

- If you drag folders to the project (Professional only) Goldfish shows now a folder icon in the list instead of a file icon
- The export quality of jpeg images is now used correctly as set in the property "Project > JPEG Export quality"
- If your login data was incorrect the ftp publisher enables now the login button again. So you don't have to recreate the website for the next login try
- The created xml file for news feeds has the correct modification date now
- The publish button is now always enabled if you publish a website for the first time
- Dragging a project file to the goldfish icon in the dock does not cause an internal error any more
- Duplicating a cart item does not forget the properties for the background image any more
- Goldfish uses now a more Mac OS X like internal structure including UTI's for the Mac version
- The spinner appears and hides now always correctly in form items
- Pages where the property "Page > Create as Folder" is enabled, can now be selected as "Menu > Base Folder" in the properties of a navigation menu

About Goldfish 3

Goldfish 3 is a website creation tool, which runs on Macintosh and Windows. Users can build their website in a few simple steps with drag and drop. There are many beautiful designs available for beginners. Professionals can create the layout for their website without programming skills. Goldfish is free to try and free for download.
