

## **Fishbeam Software Releases Goldfish 3.5**

Today, Fishbeam Software releases the website creation tool Goldfish in a new version. Goldfish 3.5 comes with some new features for the navigation menu and the gallery. We have fixed many bugs too. Goldfish 3.5 is available at <http://www.fishbeam.com> starting from \$69 and is free for all existing Goldfish 3 users.

### **New features in Goldfish 3.5**

- Goldfish uses now an updated version of the jQuery JavaScript framework for web apps like the guestbook, form, onlineshop etc.
- Goldfish has now all necessary files included in the app-bundle on Mac OS X and is now delivered as a single .app package
- Fishbeam News are now integrated in Goldfish
- New file version for compatibility with the future release of Goldfish 4
- After installing a new Goldfish version, Goldfish updates now all code files of an existing website. This prevents from many bugs on the website eg. not working forms
- Goldfish plays now a new sound if publishing has finished
- The menu item has now several options for highlighting parent entries of a page. That gives you more flexibility when creating menus: Property "Menu > Menu > Highlight Entry"
- Gallery icons have now several options how Goldfish crops images: Property "Gallery > Preview Icon > Image Matching"
- Goldfish works now better with Mac OS X Lion

### **Fixed bugs in Goldfish 3.5**

- Grouping items does no longer cause errors and does no longer change the layer position of the items.
- The popup for page selection when creating links does no longer cause sometimes a crash
- Closing the last window does no longer cause a crash on Windows
- When starting up, Goldfish crashes no longer if a bug with installed clips occurs

- Goldfish crashes no longer when clicking in the project list below the area templates
- Dragging pictures on Windows works now always correct
- The open file progress window is now shown always in the foreground on Windows
- The help browser shows now the correct border on Windows 7
- The menu separator in the edit menu is now correct on Windows
- The file menu is now named correct on Windows in the German version
- The context menu of the project list is no longer empty after the second usage
- Goldfish shows no longer an empty editor after changing the page from a long and scrolled down page
- Back and forward buttons work now again in the Help
- The popup menu for links shows now always correct entries (broken in Goldfish 3.4)

### **About Goldfish 3**

Goldfish 3 is a website creation tool, which runs on Macintosh and Windows. Users can build their website in a few simple steps with drag and drop. There are many beautiful designs available for beginners. Professionals can create the layout for their website without programming skills. Goldfish is free to try and free for download.
